STAGED DEMO: role-played call with SYNTHETIC data. The caller is a volunteer, not a real scammer; Uncle's name, phone number, account and bank are invented. Nothing in this packet describes a real person or a real crime.

Evidence packet: call 20261104_124958_c42d

A PDF view of the JSON packet (schema mirage-evidence-packet/0.1), generated 2026-11-04T13:03:59+05:30. The JSON file is the record.

Call summary

Call	`20261104_124958_c42d` (started 2026-11-04T07:19:58+00:00 UTC)
Duration	99.8 s
Language	hi-IN requested; detected per segment: {"hi-IN": 14, "en-IN": 4}; format codemix
Scenario	digital_arrest (the project's keyword guess, not a finding)
Agent	Rajesh Uncle (fictional persona); automated
Caller audio silenced	31.4 s (while Uncle spoke)
Intel	3 item(s); by confidence {"heard": 1, "keyword": 2}; 1 need confirmation

Intel

kind	value as heard	confidence	needs confirmation	valid	quote (verbatim)	t (s)	notes
case	`82614`	keyword	no	yes	आठ | दो | छह | एक | चार	30.42	
phone	`0000318652`	keyword	no	yes	zero | जीरो | 00 | तीन | एक | आठ | छह | पाँच दो	49.2	synthetic number (00 prefix)
vpa	`verifyofficer123@okaxis`	heard	yes	yes	verify officer one | Two three at OK axis	85.33	handle joined from the words heard, 'OK axis': confirm it

Payment intel: upi_vpa verifyofficer123@okaxis (heard)

Confidence is the extractor's own label, copied from the call; not a probability, and nothing has been upgraded. **t** is seconds from the start of the call at which the transcript carrying the quote arrived; not when the words were spoken.

- **keyword**: a specific word (case, account, phone ...) came just before the number
- **heard**: an id or code as heard (UPI id, IFSC, spelled letters)

Stage timeline

stage	from to (s)	entered because (rule hits)
S0	0.0 to 20.72	start of the call
S1	20.72 to 74.39	S1: arrest +2
S3	74.39 to 99.8	S1: verification +1; S3: deposit +1.5, refundable +1.5, भेज* +1.5

Stages and intel are as the brain recorded them DURING the call, by the rules in force then; a later change to the rules does not alter a saved call. A stage starts at the time of Uncle's reply on the turn where the keyword rules moved it, not when the caller said the words; 'entered_because' lists the rule hits.

Transcript excerpt

t (s)	lang	caller, as transcribed (codemix)
30.422	en-IN	case number है आठ
31.563	hi-IN	दो।
32.703	hi-IN	छह
33.922	hi-IN	एक।
34.938	hi-IN	चार
49.203	hi-IN	मेरा direct number लिख लीजिए। phone number है zero
50.172	hi-IN	जीरो
52.485		00
53.797	hi-IN	तीन।
54.922	hi-IN	एक।
55.922	hi-IN	आठ
56.985	hi-IN	छह।
58.813	hi-IN	पाँच दो
85.328	en-IN	UPI ID है verify officer one

Excerpt: 14 of 19 caller segments; Uncle's 6 lines and the full text are in the JSON. Not shown: anything the caller said while Uncle's voice played (the microphone was silenced then).

Ending and disclosure

How the call ended	**caller_side_hangup** (hangup) at 99.8 s. The call page's Hang up ended the call. The log cannot say who pressed it; in staged calls the person playing the caller sits at the same computer.
Uncle said he is an automated assistant	no. Identity questions: 0 deflected in character, 0 answered honestly.
Disclosure policy	Uncle is an automated agent and never says he is a person. A sincere 'are you an AI?' gets the honest answer at once when the call shows little evidence of a scam; with strong evidence he deflects up to twice in character, then answers honestly. This is the project's own policy, not a legal opinion.

Integrity

sha256	`55d1d80b2e51418144c52f87c4c74528ef457f56da148255ba274b47a3a1a61f`
generated_at	2026-11-04T13:03:59+05:30
covers	the canonical JSON of this packet without the integrity block (generated_at is inside the covered part)
verify	`python -m mirage.packet verify data/packets/20261104_124958_c42d.json`
note	The hash only shows that this file is unchanged since it was generated. No claim is made about legal admissibility. This PDF is a rendering; the hash covers the JSON file, not this PDF.
